

Given an HTML file named **page.html**. Create a CSS file named **page.css** to style the page. You **are not allowed** to modify the HTML file at all. You only want to work on the CSS file. Figure 1(a) shows the original look of the page, while Figure 1(b) shows the expected look after applying the styles. The style specifications and the assessment are given in Table 1.

**Figure 1(a):** Original page (before applying the styles)

**Figure 1(b):** Expected output

**Table 1:** Specifications to style the page and the assesement.

<b>Item</b>	<b>Specification</b>
The wrapper (A)	Set the width of the wrapper with an appropriate size.
	Align the wrapper so that it sits in the middle of the browser horizontally.
	Specify the wrapper's background and text color to black and white, respectively.
The title (B)	Set the title to bold and the font size three times larger.
	Let the title sits beside the image.
The sub-titles (C)	Set the sub-titles to bold and the font size two times larger.
	When the mouse pointer hovers on it, the text color turns to red.
The paragraphs (D)	When the paragraph is clicked on, its background turns to red.
